

Little Steps: A Smart Parenting Assistant

A unified, grounded digital ecosystem for newborn care and shared parenting

Darshan Hulamani • USN 1BY25MC030

Guide: Prof. Spurthy S N
Assistant Professor, Department of MCA

BMS Institute of Technology & Management
Autonomous under VTU, Bengaluru

The load is fragmented. The risk is shared.

- Scattered feeding, sleep, vaccine and reminder records
- Isolation in urban nuclear families
- Asymmetric care and invisible mental load
- Unsafe generic AI advice without context

scattered data → parental burnout → increased medical risk

Three findings. One unresolved gap.

01

Conversational support

Structured, trustworthy agents can extend parenting support.

02

Shared tracking

Coordinated infant-care records reduce mental load.

03

Grounded generation

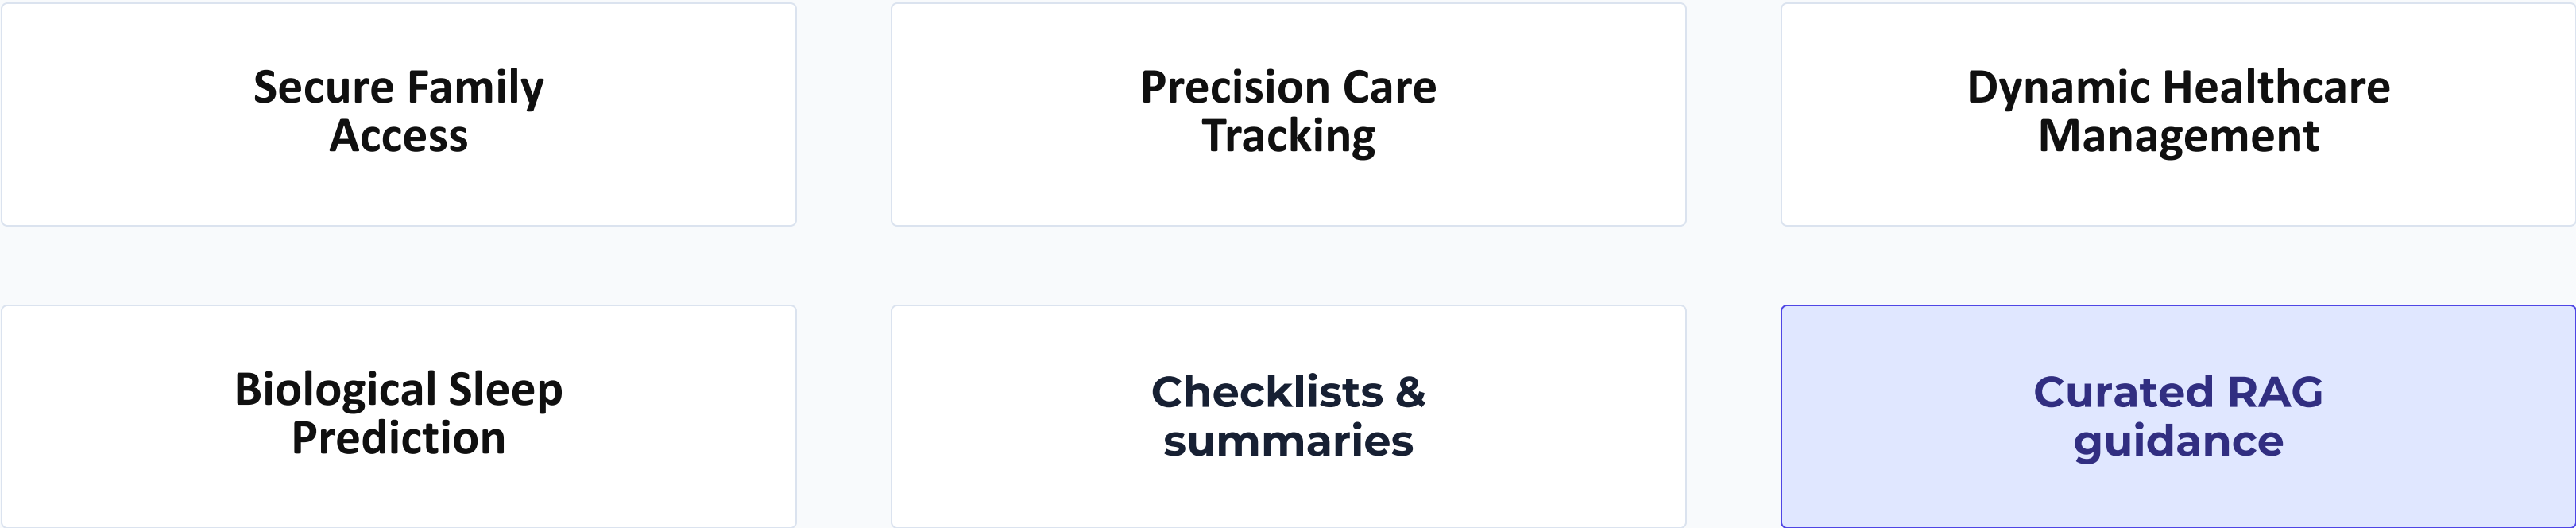

RAG improves factual consistency and trustworthiness.

RESEARCH GAP

No unified platform combines shared coordination, contextual guidance and explicit safety boundaries.

One secure family space for everyday care

Develop a unified, secure web/PWA smart parenting assistant for shared baby-care activities.

Phase II: sleep prediction • WHO growth • IAP scheduling • voice logging • maternal hub

SDG 3 alignment, designed through ESG

3

GOOD HEALTH & WELL-BEING

Target 3.2 • Support essential care and help end preventable newborn and under-five deaths.

ENVIRONMENTAL

Digital records reduce printing and avoidable travel.

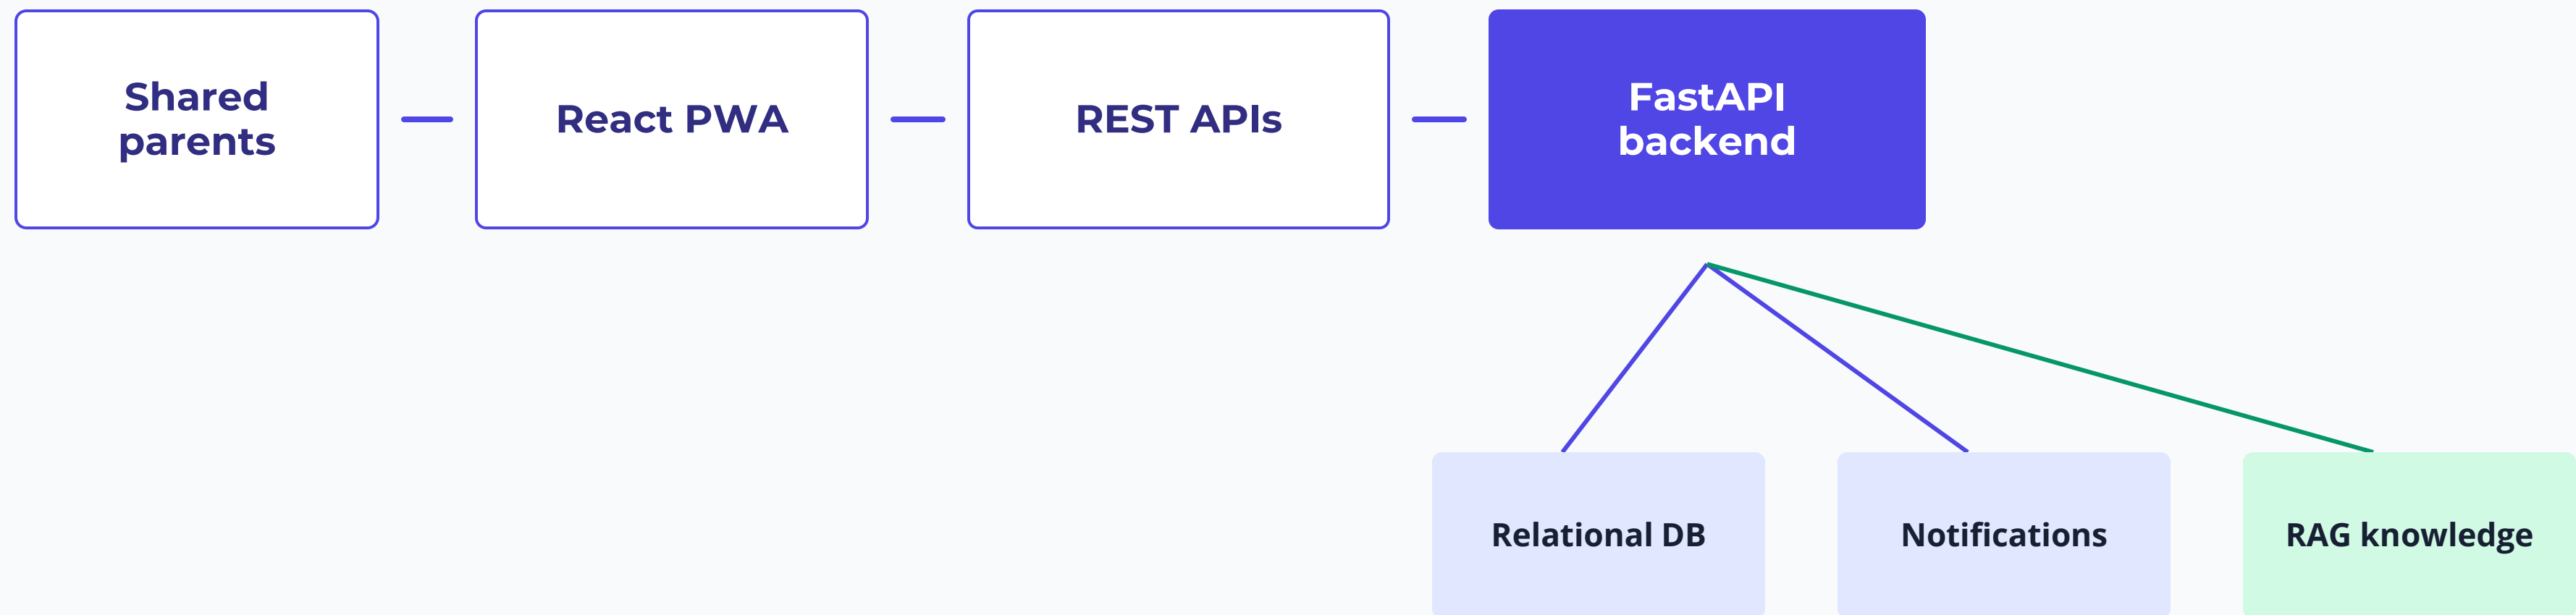

SOCIAL

Shared access promotes equal parental involvement.

GOVERNANCE

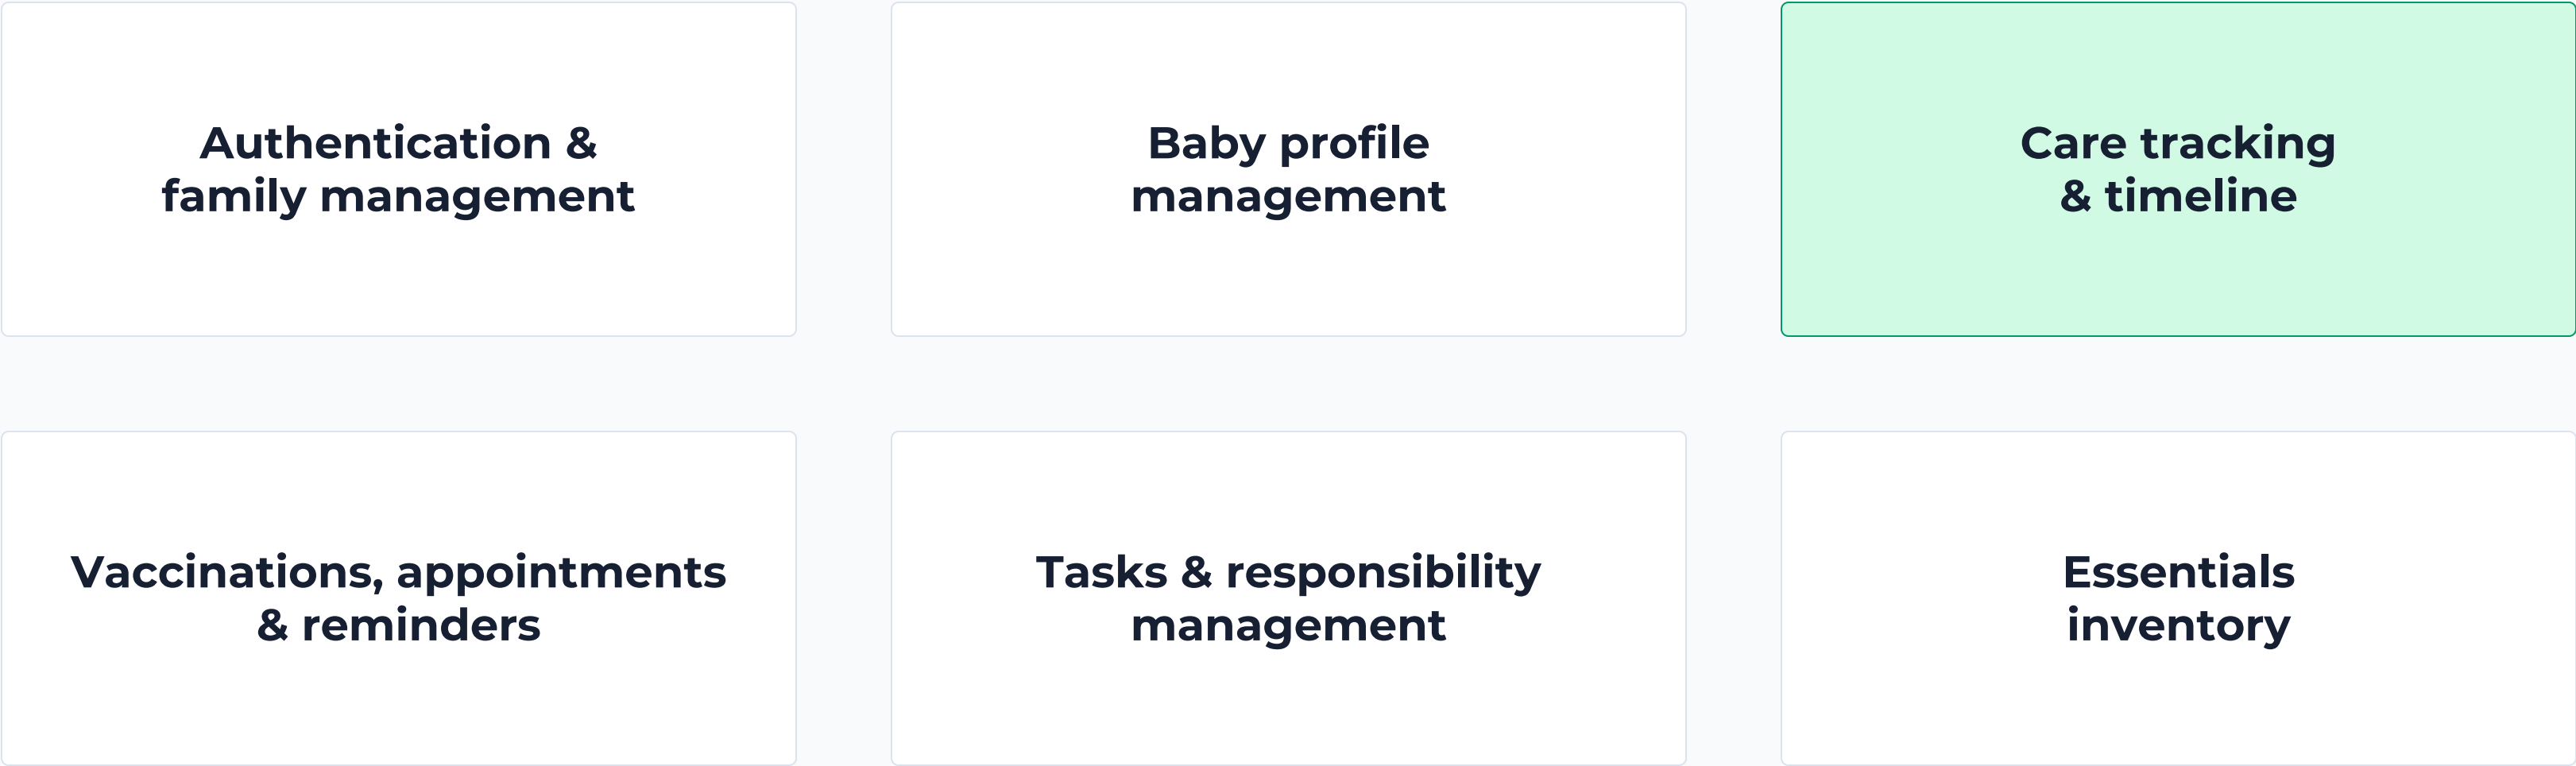

RBAC, secure hashing, protected records; no diagnosis or prescription.

A modular, authenticated full-stack flow

TOOLS Git/GitHub • VS Code • Node.js/npm • Python 3.x • OpenStreetMap / places API

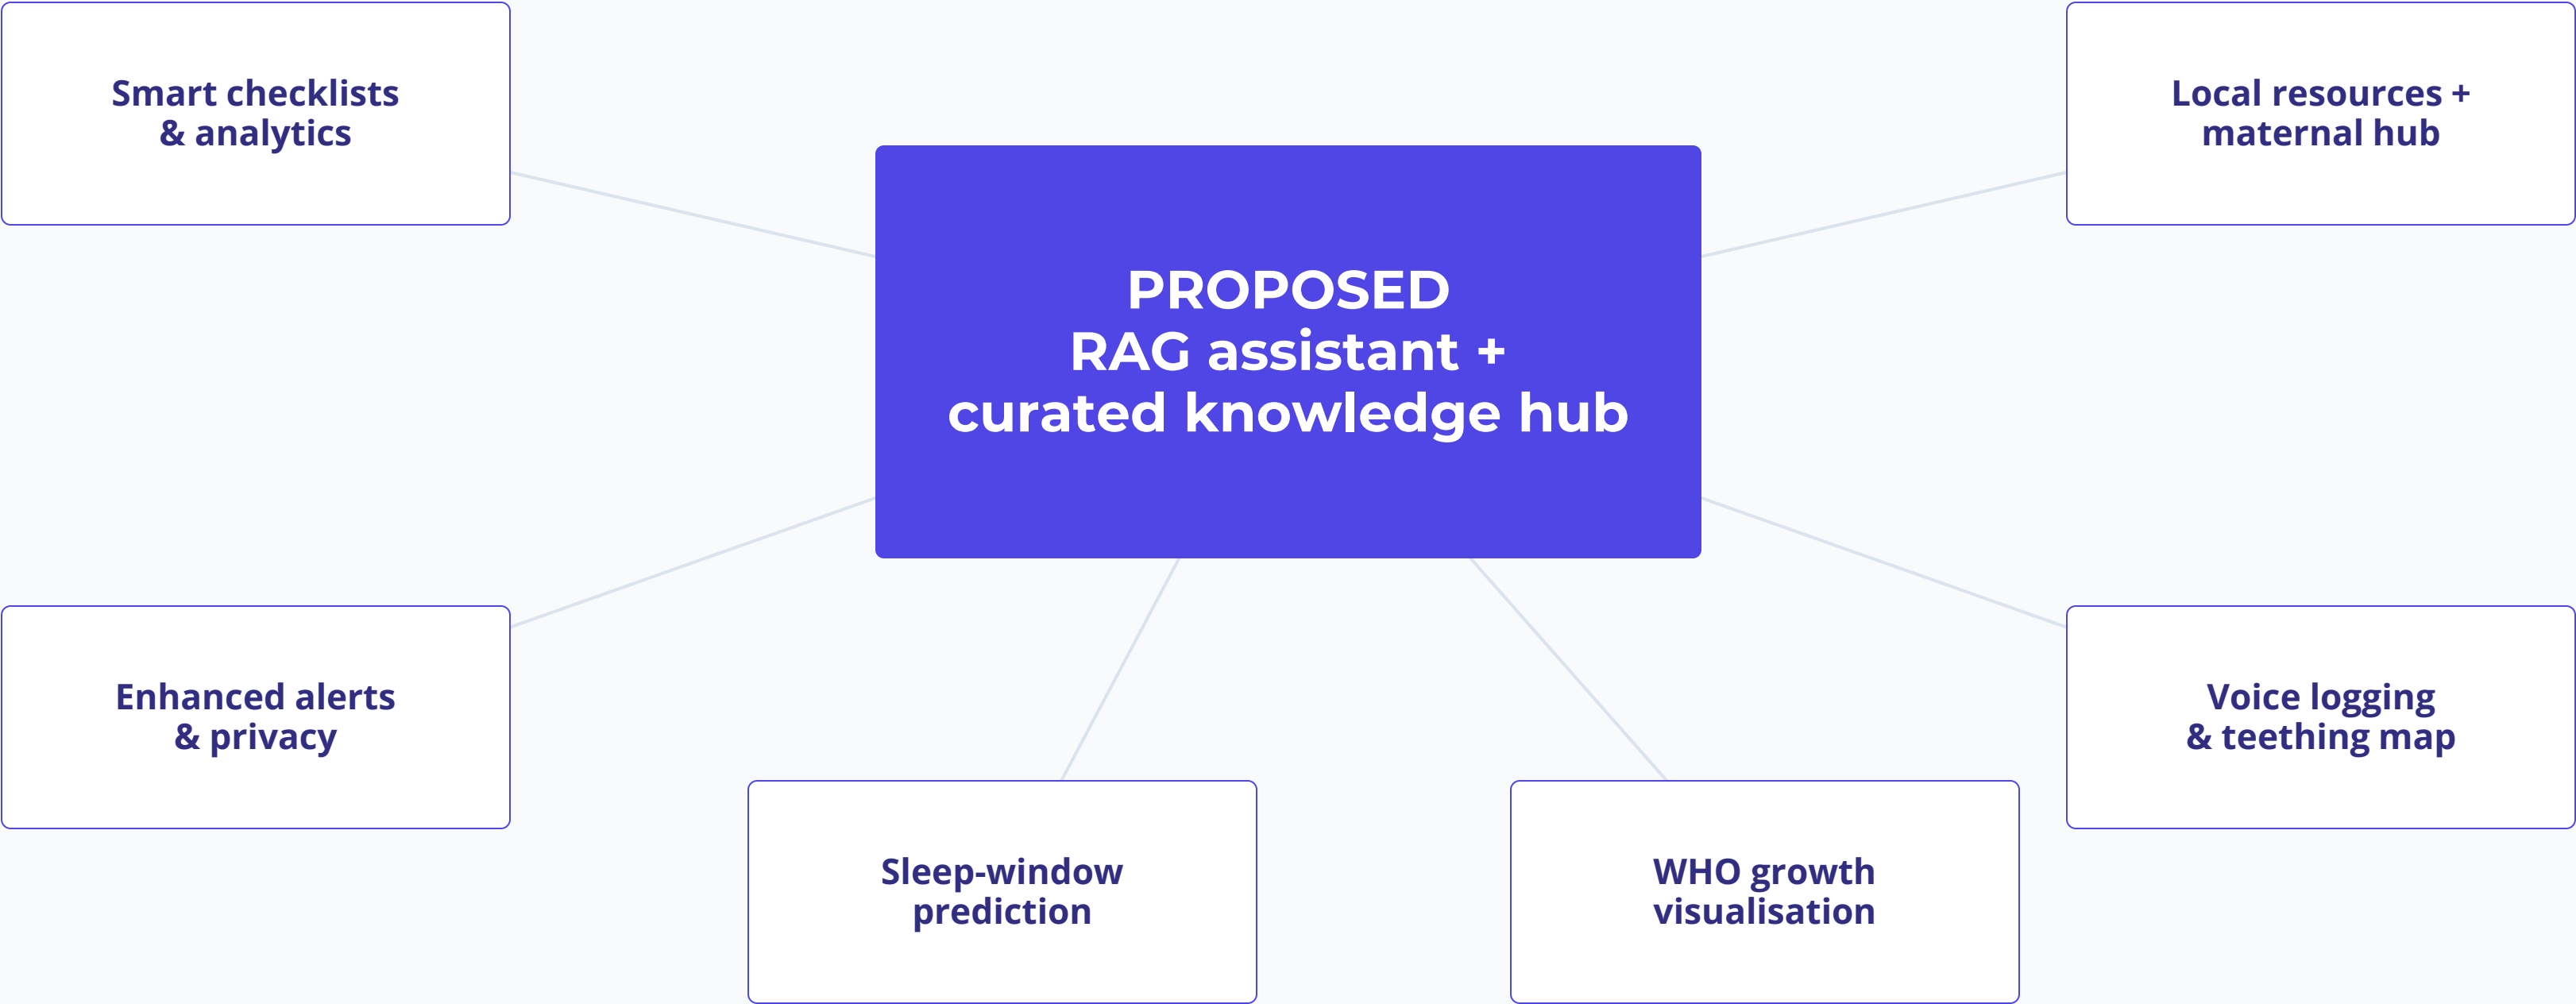

Phase I builds the shared-care foundation

Secure access • Shared chronology • Coordinated action

Phase II adds intelligence — after the foundation

FUTURE ENHANCEMENTS — NOT CURRENT FEATURES

LITTLE STEPS

From cognitive overload to coordinated care.

A privacy-aware shared platform, grounded guidance and a clear path from core foundations to responsible intelligence.

Thank You
